BATHROOM (R) EVOLUTION

CEA

The new bathroom dimension

“ABACO is a common thread that runs through my entire life. It began when I was just a boy, following my father to construction sites to see how water pipes were laid.

That extraordinary experience of bathroom design had an impact on me and I endeared the bathroom because of its richness in technology and innovation. My professional life however, has always been a search for simplicity and order, so I began to think about the beauty of creating a modular container that would accommodate all the functions of the bathroom in a way that it was simple and straightforward. Only steel could convey all of this: an extremely hygienic, antibacterial material, preserver of experience, knowledge and innovation, a friend.”

NATALINO MALASORTI

Integrated Modular System

- A unique bathroom composition
- A large range of coverings - steel, marble, wood and Corian®
- A hidden toilet with a heated seat in stainless steel
- An integrated plumbing system and electrical equipment
- A hidden WC flush and toilet cleaning system
- A bidet toilet spray for women and men
- Two different sizes of backlit mirrors
- More chests of drawers covered in leatherette

The purity of stainless steel

ABACO is made entirely of AISI 316L stainless steel, an alloy with a reduced content of carbon, universally recognised for the characteristics of hygiene and excellent resistance to corrosion. Thanks to its chemical composition, AISI 316L stainless steel does not oxidize and does not rust in contact with external agents such as water and air. The natural protective film that stainless steel is equipped with makes the material resistant over time and always restorable. CEA products are entirely made with the aid of mechanical procedures that maintain unaltered the unique and extraordinary characteristics of the alloy. The stainless steel used in CEA production is not treated with chrome plating or any galvanic processes, preserving the properties of an ecological, eco-friendly, completely recyclable and highly hygienic product.

MIR02 - Extra clear mirror Ø 550 mm
 thickness 4 mm, polished edge, sandblasted
 back edge 20 mm with front LED lighting
 (3000K). Stainless steel fixing structure

WBN03 - Countertop washbasin (Ø 425 mm,
 H. 470 mm) with overflow and siphoned up
 & down waste drain completely inspectable

Tap: **OPUS** collection

>
ABC01 - Toilet module with integrated bidet
 function and jet cleaner, heated seat with soft-
 open and soft-close cover, toilet roll holder,
 drawer with leatherette lining and LED lighting
 (3000K) activation via presence sensor

Material: Stainless Steel satin finish

Integrated Lighting System

This monolithic composition features a plinth with integrated floor lighting, which serves as a courtesy light. The lighting extends along the entire rear of the structure, illuminating the wall it leans against.

MIR02 - Extra clear mirror Ø 550 mm thickness 4 mm, polished edge, sandblasted back edge 20 mm with front LED lighting (3000K). Stainless steel fixing structure

WBN04 - Freestanding washbasin (Ø 425 mm, H. 900 mm) with LED floor lighting (3000K), overflow, floor drainage and siphoned up & down waste drain completely inspectable

Tap: CROSS collection

Material: Stainless Steel satin finish and basin in Copper satin finish

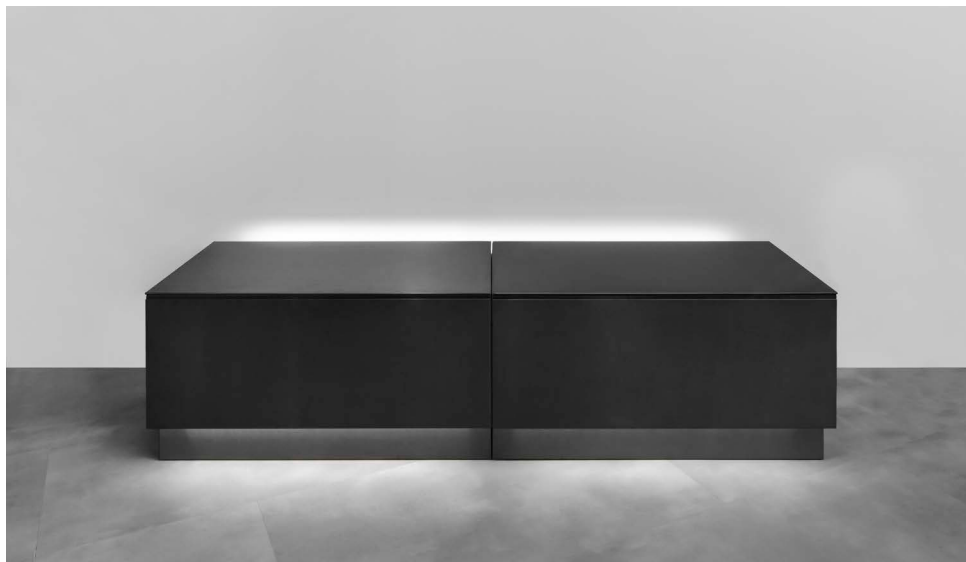

Special finishes

Special finishes treatments are the result of an accurate work of chromatic choice and technological development that is based on a high thickness deposition of mixtures of mineral powders and graphite. Thanks to this process, the steel surface is even more resistant against cleaning and chemical agents. The CEA special finishes emphasize the unique properties of AISI 316L stainless steel, increasing the gloss and hardness of its surface. Special finishes are ecological and biocompatible.

WBN03 - Countertop washbasin (Ø 425 mm, H. 470 mm) with overflow and siphoned up & down waste drain completely inspectable

Tap: REGOLO collection

Material: Stainless Steel Black Diamond satin finish

Comfort and hygiene

ABACO WC module promotes gender equality in toilet use with increased comfort and relaxation thanks to the sitting position on an ergonomic heated seat, guarantees hygiene and ease of cleaning as it is made of stainless steel. By eliminating the removable seat, ABACO prevents the transfer of bacterial contaminations on the surface.

Corian®

ABACO is available in Corian® cladding for a minimalistic and pure design. Combinable with details in satin steel finish or special finish, it reveals aesthetic and technological innovation.

ABC01 - Toilet module with integrated bidet function and jet cleaner, heated seat with soft-open and soft-close cover, toilet roll holder, drawer with leatherette lining and LED lighting (3000K) activation via presence sensor

Material: Stainless Steel Black Diamond satin finish clad Corian®

Natural Stone

The modularity of the composition is enriched by natural cladding materials such as stone and marble, which allow the product to be interpreted in different finishes and shades. The innovative character of ABACO is highlighted by the thickness of the front of the drawer units and the cover, which is only 10 mm for a particularly clean and elegant volume.

WBN03 - Countertop washbasin (Ø 425 mm, H. 470 mm) with overflow and siphoned up & down waste drain completely inspectable

Tap: CARTESIO collection

Material: Stainless Steel Black Diamond satin finish and basin in polished finish

ABC04 - Module with hole for countertop washbasin, predisposition for one-hole tap on the right, drawer with leatherette lining and LED lighting (3000K) activation via presence sensor

Material: Stainless Steel Black Diamond satin finish cladded Breccia Imperiale Marble

Leatherette

ABACO is a large container that allows you to store all bathroom toiletries and personal care items. The drawer units are completely removable and lined with leatherette which is available in different colours to match the external finish whether it is steel, marble, stone or wood. The choice of leatherette for lining the drawers is functional in simplifying the cleaning of the surfaces.

ABACO is a product capable of transforming itself with extreme ease thanks to the customization of its finishes, while maintaining the same steel core which makes it an eternal and unique product.

cladded Canaletto Walnut Wood

Toilet module’s control buttons

The toilet module, patented by Natalino Malasorti, combines the functions of toilet, bidet, and flushing system into a unique design. This innovative approach promotes gender equality in restroom usage by allowing both men and women to use the toilet comfortably. It features an ergonomic heated seat for enhanced comfort and relaxation. Made of stainless steel, the toilet ensures hygiene and easy cleaning. Furthermore, the lack of a removable seat reduces the risk of bacterial contamination on surfaces.

Bidet Function

Rear Bidet Jet

Press to turn the rear bidet jet on or off. A safety feature deactivates the bidet function after 3 minutes of use.

Double Front Bidet Jet

Press to turn the front bidet jet on or off. A safety feature deactivates the bidet function after 3 minutes of use.

Toilet Cleaning and Jet Cleaner

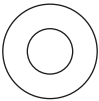

Press twice to start an automatic mini-flush for toilet cleaning. This function should be activated while using the toilet. Press once to turn the jet cleaner on or off. A safety feature deactivates the jet cleaner function after 3 minutes.

Toilet Flush Options

Full Flush

Flushes 5 litres. To rinse again, wait 60 seconds.

Eco Flush

Flushes 3 litres. To rinse again, wait 35 seconds.

Heated Seat Control

Press the button to toggle the heated seat function on or off. Press and hold the button to adjust the seat’s heat level.

Integrated modular system

ABACO is a modular, pure design, and linear system, which hides sanitary functions and plant-engineering technology within a single volume aimed at adapting to any room of the house. It presents itself as a silent and elegant object that when in function, it embodies all the strength of its innovation.

The toilet which is an Industrial Invention Patent by Natalino Malasorti himself, merges drain, flush and bidet functions. ABACO is entirely made of stainless steel, a high-performance material, hygienic, antibacterial, totally recyclable and ideal in a bathroom environment. Its durability over time is the essence of quality and ecology. Even the special finishes (Black Diamond, Light Gold, Copper and Bronze) in which ABACO is available are obtained through environmentally friendly processes. To enrich the modularity of the compositions, natural cladding materials such as marble and wood are added allowing different interpretations and shades for an even more sculptural and refined style.

The ABACO project can also be customised in various marble and stone finishes, according to the customer's preference. Our consulting and project development department, which supports architects and interior designers, can be reached at the email address abaco@ceadesign.it
